

## How To Get Your Microsoft Certificate

If you want to see your chances improving in the IT industry it is a good idea to get your Microsoft Certificate. Because of it being such a competitive field it is crucial that you select the right Microsoft Certificate training course in order to prepare you for when the time comes to take the exams.

In this article we look at how to go about obtaining any kind of Microsoft certificate whether it is a Microsoft C++ Certificate or MCSA (Microsoft Certified System Administrator).

As you will soon find out there are a number of different courses that are available which you can take, but unfortunately they do not all provide the same standard of training. It is therefore important that you look closely at each course and what they offer before making your final decision.

If you are looking for a way to obtain such certification but do not wish to leave your currently employment then doing yours online is a good option. One of the great things about doing your course online is that you can actually study at a pace that suits you. However, you will need to discipline yourself to ensure that you take time out each day or each week to complete the studies that are required as part of the course.

If you feel that studying on your own is going to be difficult and do not want to leave your current job consider doing your Microsoft certificate training either at weekends or in the evenings. There are plenty of training schools who offer such courses and here you will be able to work in a more traditional classroom setting that will help you to achieve your goals.

As you will soon discover once you have obtained your Microsoft Certificate (no matter which one) it will be extremely beneficial to your career in the IT industry. Of all the certificates now available for IT personnel those that come under the Microsoft mantle are not only widely recognized by respected as well. Through the right Microsoft Certificate training one will be work in a number of different areas of the IT industry.

When it comes to your Microsoft certificate training you need to decide which platform you wish to take it in. Today you have a choice between either Windows Server 2003 or Windows 2000. But in order to undertake training in Windows Server 2003 you need to have at least 12 months experience in relation to both network and desktop operating systems. Plus at the end of the training you will be required to take 6 core exams along with one exam that you have elected.

For those who are intending to obtain a certificate for Microsoft Windows 2000 platform again you need to have at least 12 months experience but this time in relation to Microsoft's network operating systems only. For you to get your Microsoft Certificate at the end of your training you need to take and pass 5 core exams but two rather than one elective exam.

Through getting the right kind of Microsoft Certificate training one is well on the road to actually being able to get the better paid jobs in what has become an extremely competitive industry. Having such certificates is unlikely to hinder your IT career ambitions at all.
